## **DETAILED ACTION**

### **Allowable Subject Matter**

1. Claims 9-10 are allowed. The following is an examiner's statement of reasons for allowance: The prior art of records does not teach or suggest the limitations "the flip-flop circuit changes the level of the light-on/off signal to be outputted to cause the modulator to cut off supply of the drive current when a source voltage is lower than a predetermined voltage and maintains a state in which the drive current is cut off until the data signal and the clock signal for directing light emission are supplied even after the source voltage has reached the predetermined voltage" in claim 9. The closest prior art, Tahara et al. (US 5,548,435) discloses optical transmitter and Miyazaki et al. (US 6,040,931) disclose optical transmitter, terminal station apparatus having the optical transmitter, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

### **Conclusion**

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- a. Tahara et al. U.S. patent no. 5,548,435. Optical Transmitter

- b. Yoshie U.S. patent no. 6,353,358. Optical transmitter, terminal station apparatus having the optical transmitter
  - c. Noda et al. U.S. patent no. 5,900,959. Optical transmitter, optical communication system
